**(World leader, international leader, scientist, philosopher, thinker,
virologist, pharmacist and medical scientist cosmologist Fang Ruida
(14/5/1949---)).**

New year greetings

Dear ladies and gentlemen, dear friends and guests:

2022 is about to pass, and 2023 is coming. The 8 billion people around the world are rejoicing and celebrating the coming of the great 2023. At the moment of this joyful and great festival, first of all, I would like to sincerely congratulate everyone on their physical and mental health, successful career, happy family and happy new year.

Thousands of purples and reds, thousands of flowers and thousands of trees, Wan Muchun after the cold death. The great year 2022 is coming to an end. People all over the world have made great achievements through hard work, selfless work and passion, and they are welcoming the new year with full confidence. In particular, the people of all countries in the world will defeat the 2019 new crown virus and various mutant virus epidemics, and will achieve more and more brilliant victories, which deserves our joy and encouragement. We will unswervingly, persevere, and make persistent efforts to strive for greater new victories in epidemic prevention and anti-epidemic, and welcome the bright and brilliant new spring of 2023. The new crown virus has been rampant for three years, and all mankind has paid a high price. More than 600 million people have been affected by the epidemic, and more than 6 million people have died. The economic and other aspects have suffered huge losses. It is worthy of high vigilance and serious reflection by all mankind. The harm of virus plague should not be taken lightly, because virus germs and microorganisms will exist in nature for a long time. In the 21st and 22nd centuries, the scientific and technological revolution is developing rapidly, and the new smart industrial revolution and the planetary revolution are developing and growing on the vast planet. All mankind is facing unprecedented development opportunities and various challenges or crises, such as earthquakes, plagues, and climate change. , resources and environment, population increase, land and food, regional conflicts, war risks, even the danger of nuclear wars, unbalanced development, gap between rich and poor, development and vicious competition among countries, conflicts of civilizations, competition for interests, obstacles in

consciousness and concepts, evolution and changes in the natural universe We must not take it lightly or turn a blind eye to the influence and changes of the earth and solar system, but must face it seriously. Only in this way can we overcome all kinds of unfavorable factors and various dangerous challenges and stride forward towards a great new world and a new era. Human beings create history and rewrite history. Wrong and old things are untenable and will eventually be replaced by new and correct things. This is the law of the evolution and change of the natural universe, and it is also the objective law of the development and evolution of human society. Human society can sometimes create some weird historical miracles at will. In front of Nuoda's natural universe shrine, human beings are just half of insignificant particles of dust.

Dear ladies and gentlemen, dear friends and guests:

The entire history of human beings The whole history of the world is nothing more than the history of human beings moving from primitive wildism to free rationalism. The historical development and evolution of mankind is very long, complicated and very difficult. The old traditional affairs are often the natural inertial inertia force of historical progress. The stubborn and powerful forces cannot be ignored or underestimated. Human history The history of the world is not one moment, one event, one place, one moment, but a long-term, multi-dimensional and changeable, positive and negative electricity, positive and negative will always run through the entire natural human history and social process. The world and human society are not natural big gardens, where flowers are fragrant and birds are singing, and flowers are falling everywhere. On the contrary, weeds and vines are overgrown in the garden, and all human beings need to carefully repair and tidy it up so that a hundred flowers can bloom and be colorful. In the 21st and 22nd centuries, the world will experience great development and great changes, which is not surprising. 100 years, 200 years, 300 years, 500 years, 1,000 years, 5,000 years, 10,000 years, 1,000,000 years, 1,000,000 years, the development and evolution of human history will never stand still, let us be full of confidence and stride forward to meet the great era , to move forward bravely towards a new world of great peace, rationality, freedom, equality, justice, democracy, fraternity, happiness, warmth, prosperity and inclusiveness for all mankind, avoid all kinds of bias and extremism, learn from each other, and share happiness and well-being. This is the due meaning of the 8 billion people of all human beings, the righteousness of reason, the righteousness of freedom, and the righteousness of blessings. Nothing can

replace or replace them.

Dear ladies **and gentlemen, dear friends and guests:**

2022 is about to pass, and 2023 is long overdue. The splendid fireworks are erupting all over the sky, and the colorful flowers are about to bloom. Let us bid farewell to the old and welcome the new with joy. Again, I wish you all a happy and healthy New Year 2023.
